Detailed Contents

1. *Drylandia* and the Dawn of Time: Introduction to Plant Ecology in the Middle East.

- 1.1 Introduction
- 1.2 *Which* Middle East?
- 1.3 Previous plant studies of the Middle East
- 1.4 Hot, dry, hot and dry?
- 1.5 Crustal, tectonic effects
- 1.6 The more recent past
- 1.7 Climate relicts and the 'regeneration niche'
- 1.8 Water as a trophic currency
- 1.9 Endemism and species range
- 1.10 Primal forest in Arabia and conservation
- 1.11 Summary

2. The Lay of the Land: Plant Geography in the Middle East

- 2.1 Boundaries
- 2.2 Geological characteristics
- 2.3 Coastal and Desert environments
- 2.4 Mountains and plateaux of the Middle East
- 2.5 Rivers
- 2.6 Libya
- 2.7 Egypt
- 2.8 Sudan: the Red Sea Hills and Jebel Marra ranges
 - 2.8.1 Sudd swamps
- 2.9 Ethiopia and the Horn of Africa
- 2.10 The Red Sea and Aden Gulf Basins
- 2.11 Yemen (and Socotra)
 - 2.11.1 Endemism in Yemen
 - 2.11.2 Socotra
 - 2.11.3 The Socotran flora
- 2.12 Oman
- 2.13 United Arab Emirates
 - 2.13.1 Plants of the UAE
 - 2.13.2 The eastern UAE and Musandam Peninsula
- 2.14 Saudi Arabia
 - 2.14.1 Plant resources and endemism in the Saudi flora
- 2.15 Bahrain
- 2.16 The Hawar Islands
- 2.17 Qatar
- 2.18 Iraq
- 2.19 Kuwait
- 2.20 Jordan
- 2.21 Israel, West Bank and Gaza
 - 2.21.1 Vegetation of the mesic parts of Israel and Jordan: maquis and forest
 - 2.21.2 Open forests of *Quercus ithaburensis*, and other vegetation
- 2.22 Syria
- 2.23 Lebanon
- 2.24 Cyprus
- 2.25 Turkey
- 2.26 Iran

- 2.27 Armenia
- 2.28 Azerbaijan
- 2.29 The mountainous Caucasus
- 2.30 Summary

3. Continents in Motion and Global Climate Change: Understanding Past and Present Plant Communities

- 3.1 Miocene tectonics (23 – 5.3 Ma) and present-day plant communities (ghosts of environments past)
- 3.2 Relictual vegetation
- 3.3 Socotran Dragon's-blood trees and other relicts of Mio-Pliocene Laurasian subtropical forests and climate change
- 3.4 Djibouti and aging populations of the Bankoualé Palm, *Livistona carinensis*
- 3.5 Genetic 'footprints' of past vegetation change, and current populations of oaks and laurels
- 3.6 Relictual Junipers in the Middle East
- 3.7 Deserts in the Middle East
- 3.8 Desertification and climate warming
 - 3.8.1 Drivers of desertification
- 3.9 Summary

4. Desert as a Heterogeneous Environment

- 4.1 Introduction: deserts and desert vegetation types
- 4.2 Desert phytogeography
- 4.3 Desert growth forms and Cactaceae
- 4.4 Desert plant communities
- 4.5 Desert ecosystems and specialized habitats
- 4.6 Coasts and Mangroves
- 4.7 Facilitation effects and the regeneration niche
- 4.8 Comparing desert and Mediterranean ecosystems
- 4.9 Elevation and warming
 - 4.9.1 Patterns of species richness, elevation and the 'Mid-domain Effect'
- 4.10 Regional ecology: plant metapopulations vs. landscapes
- 4.11 Connectivity and the background matrix
- 4.12 Summary

5. On Growing up Dry

- 5.1 Introduction to dryland plant adaptations
- 5.2 Succulence
 - 5.2.1 Succulence and altitudinal differentiation in Yemen's Haraz Mountains
- 5.3 Succulence and sclerophylly, foliage angles and other strategies for dealing with drought
- 5.4 *Degrees* of leaf, stem and caudiciform succulence
- 5.5 Dryland photosynthetic variability
- 5.6 Spinescence (and keeping the grazers at bay)
- 5.7 *Euphorbia* and the Middle Eastern cactus niche
- 5.8 Halophytes and living with *salt* as a compounding variable
- 5.9 Desert life forms, demography and dynamics
 - 5.9.1 Life span and life-tables
- 5.10 Summary

6. Sex in a hot dry place

- 6.1 The importance of timing!
- 6.2 Pollination syndromes in the desert

- 6.3 Breeding systems
- 6.4 Semalparous flowering
- 6.5 Apomixis (asexuality and a balance between long- and short-term advantages)
- 6.6 Sexual specialization and lability in expression
 - 6.6.1 *Thymelaea hirsuta*
 - 6.6.2 *Atriplex canescens*
 - 6.6.3 *Ochradenus baccatus*
 - 6.6.4 *Acer negundo*
 - 6.6.5 *Pinus halepensis*
 - 6.6.6 *Diploaxis harra*
- 6.7 *Euphorbia* species
- 6.8 *Acacia*, a keystone tree species in the Middle East
- 6.9 Summary

7. Seed Dispersal, Dormancy, and ‘Bet-hedging’ in Desert Plants

- 7.1 Introduction
- 7.2 Dispersal in the desert
- 7.3 Variable germination in the desert
- 7.4 Serotiny
- 7.5 Dormancy
- 7.6 Annual species
- 7.7 Fleshy-fruited perennials
- 7.8 Non-fleshy-fruited perennials
 - 7.8.1 *Acacia* species—herbivory—bruchid beetle and other biotic interactions
 - 7.8.2 Other species
- 7.9 Vicariance (and scattered vestiges of Gondwanaland in Socotra)
- 7.10 Summary

8. Chemical Ecology in the Desert

- 8.1 ‘Intelligent’ plant behaviour
- 8.2 Allelopathic interactions
- 8.3 Interactions between annuals and perennials
- 8.4 Life history strategies
- 8.5 Effects on seed germination and seedling growth
- 8.6 Some case studies
 - 8.6.1 *Anastatica hierochuntica*
 - 8.6.2 *Chenopodium ambrosioides*
 - 8.6.3 *Prosopis juliflora*
 - 8.6.4 *Coffea arabica*
 - 8.6.5 *Artemisia* species
 - 8.6.6 Host-parasite allelopathy
 - 8.6.7 Other species
- 8.7 Summary

9. Agriculture and Plant Ecology

- 9.1 Gardening, win-win and the evolution of cultures
- 9.2 The plant’s-eye-view
- 9.3 Early agricultural societies
- 9.4 Omani oasis agriculture
- 9.5 Domestication and selection
- 9.6 Humans, horses and camels

- 9.7 Fruit trees and fruit cultures
- 9.8 Plant resins
- 9.9 Eco-crises and water shortages
- 9.10 Summary
- Box 9.1 Coffee and qat in Yemen

10. Human Effects and Plant Conservation

- 10.1 Introduction
- 10.2 Deforestation and wood collection
- 10.3 Overgrazing
 - 10.3.1 Camel grazing
- 10.4 Effects of grazing on Omani juniper forest decline
- 10.5 Collection of plant materials
- 10.6 Land conversion and shifting agriculture
- 10.7 Damming of rivers and wadis
- 10.8 Water recharge wells
- 10.9 Sediment removal
- 10.10 Mining, quarrying and petroleum-related activities
- 10.11 Road construction
- 10.12 Warfare
- 10.13 Invasive species
- 10.14 Coastal development and recreation
- 10.15 Biodiversity hotspots
- 10.16 *In situ* and *ex situ* conservation
- 10.17 Populations and the ‘abundant-center’ model
- 10.18 Rear-edge populations and opportunities for conservation
- 10.19 Summary

11. Conclusions

- 11.1 Introduction
- 11.2 Desert ‘stress’ and the plants that live there
- 11.3 Biodiversity hotspots
- 11.4 Desert selections: cooperation, dispersal and ‘bet-hedging’ strategies, and absent regeneration
- 11.5 Global climate change and possible shifts in vegetation
- 11.6 ‘Keystone’ species as a source of stability and ecological resistance
- 11.7 Overgrazing and the acceleration of desertification
- 11.8 Priorities and areas for further research
- 11.9 Ongoing challenges
- 11.10 Summary
