

שם: ליאור רגב

שם המוסד: מכון ויצמן למדע

דוא"ל: lior.regev@weizmann.ac.il

תחומי עניין ומחקר: דנדרוכרונולוגיה, תיארוך פחמן 14, אקלים קדום

רשימת פרסומים רלבנטיים

1. Castagneri D, **Regev L**, Boaretto E and Carrer M, 2017. Xylem anatomical traits reveal different strategies of two Mediterranean oaks to cope with drought and warming. *Environmental and Experimental Botany* 133: 128-138.
2. Ehrlich Y, **Regev L**, Kerem Z and Boaretto E, 2017. Radiocarbon Dating of an Olive Tree Cross-Section: New Insights on Growth Patterns and Implications for Age Estimation of Olive Trees. *Frontiers in Plant Science* 8(1918).
3. Ehrlich Y, **Regev L** and Boaretto E, 2018. Radiocarbon analysis of modern olive wood raises doubts concerning a crucial piece of evidence in dating the Santorini eruption. *Scientific Reports* 8(1): 11841.
4. Castagneri D, Carrer M, **Regev L*** and Boaretto E, 2019. Precipitation variability differently affects radial growth, xylem traits and ring porosity of three Mediterranean oak species at xeric and mesic sites. *Science of The Total Environment* 699: 134285.
5. Bachar A, Markus-Shi J, **Regev L**, Boaretto E and Klein T, 2020. Tree rings reveal the adverse effect of water pumping on protected riparian *Platanus orientalis* tree growth. *Forest Ecology and Management* 458: 117784.
